

API Documentation

Overview

The CampusCare API is a RESTful service built with Node.js and Express. It uses JSON for data exchange and JWT (JSON Web Tokens) for authentication.

Base URL: <http://localhost:5001/api>

1. Authentication Endpoints

1.1 User Registration

Registers a new user (Community Member or Worker). Accounts are created as inactive and require approval.

URL: /auth/register | Method: POST | Auth: None

Body: { name, email, password, role, phone_number }

Example Success (201):

```
{ "success": true, "message": "Registration successful...", "data": { "user_id": "...", "role": "..." } }
```

1.2 User Login

Authenticates a user and returns a JWT token.

URL: /auth/login | Method: POST | Auth: None

Body: { email, password }

Example Success (200):

```
{ "success": true, "data": { "token": "...", "user": { "role": "...", "is_active": true } } }
```

1.3 Delete Account

Permanently removes the authenticated user's account.

URL: /auth/delete | **Method:** DELETE | **Auth:** Required (Any)

2. Issue Management Endpoints

2.1 Submit Issue

Reports a new facility problem with an optional image.

URL: /issues | **Method:** POST | **Auth:** community_member

Type: multipart/form-data

Fields: category, description, building_name, floor, room_number, image (file)

2.2 Get Ticket Details

Retrieves full details of a specific ticket and its comment history.

URL: /issues/:id | **Method:** GET | **Auth:** Required (Any)

Example Success (200):

```
{ "success": true, "data": { "ticket_id": "...", "comments": [...] } }
```

2.3 Update Ticket Status

Updates the current state (e.g., Assigned, In Progress, Resolved).

URL: /issues/:id/status | **Method:** PUT | **Auth:** facility_manager, worker

Body: { "status": "resolved" }

2.4 Update Ticket Priority

Sets the urgency level of a ticket.

URL: /issues/:id/priority | Method: PUT | Auth: facility_manager

Body: { "priority": "high" }

2.5 Assign Worker

Assigns a worker and automatically sets status to assigned.

URL: /issues/:id/assign | Method: PUT | Auth: facility_manager

Body: { "worker_id": "UUID" }

2.6 Add Comment / Photo Proof

Adds a text note or a photo proof (photo creates a comment automatically).

Comment: POST to /issues/:id/comments | Body: { body }

Photo: POST to /issues/:id/photo | Auth: worker | Type: multipart/form-data

3. User & Worker Management

3.1 Get All Users (Admin)

URL: /admin/users | Method: GET | Auth: admin

3.2 Update User Status (Admin/Manager)

Activates or deactivates an account to control system access.

Admin: PUT to /admin/users/:id/status | Body: { is_active }

Manager: PUT to /manager/workers/:id/status | Body: { is_active } (Workers only)
